

**Data Platform Modernization**

Acceleration of Business and operations

Uni Systems Data Platform Modernization offering combined with Microsoft Azure Database and SQL Server helps organizations overcome issues of legacy databases and accelerate performance.

**M**odernize Data Platforms helps you overcome issues of legacy databases and increase the performance, improve security, utilize machine learning capabilities, all at the same time by saving on storage and development costs.

*95% of enterprises are using cloud computing in some form, with 67% of enterprises leveraging hybrid cloud.*

## Why

- Lower cost of ownership
- Improve security, compliance
- Advanced threat detection
- Enterprise scaling at the touch of a slider
- HA & DR built in
- Increased operational agility; no more patch management, backups, hardware upgrades

## What

Move on-premises Data from any datasource (DB, files etc) to:

- Azure Analysis Server
- Azure Data Warehouse
- Azure Data Bricks
- Azure Data Lake
- Azure SQL Server

## How

- Discover & Assess
- Plan & Design
- Build & POC
- Migrate & Test
- Performance & Security
- Manage and Maintain

## Why modernize data platforms?

- Make faster and better decisions with Industry leading performance, transformational insights with data integrity
- Increase Availability of mission critical intelligent applications, data warehouses and data lakes
- Advanced security features enable you to control unauthorized access of your private data and protect data at rest and data in use
- Data Engineers with strong data management experience and a proven track-record
