

Remote Application & Desktop Access As a Service

Secure access to apps from anywhere: no initial investment, minimum changes on on-premise infrastructure

Uni Systems Virtual Apps and Desktops offering as a Service combines Microsoft Azure and Citrix technologies to help you securely deliver mobile apps, virtual desktops, SaaS and legacy applications to any device platform

Virtual Apps and Desktop as a Service will enable the delivery of applications and desktops to overcome issues of legacy applications and desktop management and at the same time increase productivity and improve security. Corporate applications are available only to compliant devices and data never leaves the datacenter.

Why

- Empowered Remote Workforce
- Simplified App and Desktop Management
- Improve security, compliance
- Advanced threat detection
- Lower cost of ownership
- Robust tools for sophisticated management and monitoring

What

Publish SaaS and on-premises Apps and Desktops to managed devices running:

- Windows 10
- iOS
- Android
- macOS

How

- Discover & Assess
- Plan & Design
- Build & POC
- Migrate & Test
- Performance & Security
- Manage and Maintain
